

GRIP IT!

Feel the difference . . .

EXPERIENCE THE *EFX*

Extensive Research by DT engineers and leading polymer physicists have produced a new level of coverstock performance...POLARIZED REACTIVE. By careful manipulation of the polymer chain we have developed a revolutionary cross linked polymer that utilizes a unique bivalent helix for its structural foundation. This associated molecular alignment is known as polarized reactive. Not to be confused with the now common phenomenon of over saturation of plasticizers to produce what is commonly called "phasing". The polarized reactive shell is an unsaturated branching of the polymers engineered to look different, feel different, skid longer and hook harder than standard reactive urethanes. When you combine the DT exclusive polarized reactive with the DT exclusive bell core, which we

have inverted and raised to increase the track flare potential, the *EFX* is guaranteed to have an EFFECT on your game.

DYNO-THANE

ENTERPRISES

SPECIFICATIONS:

- Weight Block: Inverted bell curve core
- Cover Stock: POLARIZED REACTIVE
- Weights: 13, 14, 15 & 16 pounds
- Finish: Polished
- Color: Violet with a Mauve swirl
- Flare Potential: 5 scale 1-5
- Hook Potential: 18 scale 1-20

EFX

you'll love the way it feeeeels!
