

The Technology Of The Future Today.

Dyno-Thane introduces Concept X. Through extensive research and development, computer design and human factors engineering, Dyno-thane strikes again and again! We have combined our latest core innovation...the bell curve core, with our exclusive **X-Cell** reactive cover stock to maximize track flare for super hooking action. Our cad designed bell curve core achieves a maximum differential in the radius of gyration on the X and Y axis, resulting in a track flare potential of over 5". This differential causes the ball to seek an ever changing track on the surface of the ball...thus rolling on the fresh ball surface with each revolution, result...more hook! The Concept X...bowler designed and bowler tested.
