

Power, Precision, Performance with the New Omega LM.

Based on Ebonite's original Level 4 core architecture, the new Omega LM is ready to deliver another gripping story. Our patented Acryllium™ veneer combines with a new additive, JAJ-32®, to provide a *Low Moment* of inertia for increased lane gripping and skidding tendencies in the front end of the lane. With a devastating hook that releases an incredible amount of kinetic energy into the pocket, the Omega LM means bad news for the pins.
