

*The New Ebonite Omega with Cast Acryllium Cover.*

**DOWN THE LANE, IT'S A DREAM.  
THROUGH THE POCKET, IT'S A MANIAC.**

**M**oving ball technology to the next level is no drive in the park. But the new Ebonite Omega makes that leap. And you're going to love the ride.

**T**he new Cast Acryllium Cover (CAC), together with patented, Level 4 Core Technology, gives your game the ultimate in pocket-tracking control and pin-crushing power.

It literally repels oil and unleashes an explosive force of energy into the pins.

**P**lus, the durability of CAC gives Omega a level of resistance to nicks, chipping and track marks that no reactive ball can match.

**S**o ask your pro today about the new Ebonite Omega. Nothing can surpass the power of Omega. Nothing.
