

OF COURSE WE ADVOCATE GOOD SPORTSMANSHIP.
SHAKING YOUR OPPONENT'S HAND, FOR INSTANCE,
AFTER BEATING HIM TO A PULP.

Granted, it's appropriate to be respectful of those you compete with. Just remember that being Mr. Niceguy isn't the point of the game. We certainly did when we designed the new Seawolf. The first ball

to feature our new Mega/Bite™ ST (for "super tack") reactive veneer, the Seawolf was developed to increase hook potential and provide a more continuous hook through the pocket. In fact, this veneer produces more backend hook than any Ebonite coverstock ever.

You'll also get superior energy retention, thanks to a higher radius of gyration from the modified Red Wolf core, and a high flare potential for navigating through oil carrydown, due to diametrically opposed flip blocks. Experience the Seawolf at your pro shop today. Because let's face it, being a good sport is so much easier when you're the one who wins.

EBONITE™
