

EBONITE: EVER FORWARD.

Oil absorption, coverstock technology, symmetrical vs. asymmetrical cores – these are just some of the things our R&D scientists study every day. It's research like this that allows Ebonite to continue to create the strongest and smartest balls on the market.

Our latest breakthrough? Engineering the actual surface texture of a ball chemically. It's a huge step that offers a whole new approach to improving backend motion. And we're just getting started.

Bigger discoveries for us. Better performance for you. It's a win/win situation.

Our Spike Symmetrical Mass Bias core is the most versatile core design available. With the ability to be symmetrical or asymmetrical, it opens a whole new realm of drilling options.
