

AVAILABLE WORLDWIDE 11/23/2022

CARBIDE TANK™

MEDIUM-HEAVY OIL

This Tank™ is unlike any before! The Carbide Tank™ is a Tour Edition release, armored in the strongest Microcell Polymer (MCP) cover stock to date. Featuring tread unlike any Tank™ before, the Carbide Tank™ creates a strong and very smooth motion on heavier volumes of oil that are typically found in competitive environments today.

GEAR™ WEIGHT BLOCK

The Carbide Tank™ is driven by the proven symmetric Gear™ core, which provides a low RG and moderate differential to rev up faster and dig in the oil.

15# RG: 2.48 | 15# Diff: .055 | Flare: 5"+

FRIXION™ M4 SOLID MCP

Following the proven success of the pearl Blue Tank™, MOTIV® set out to develop an even stronger solid MCP cover that was much closer to reactive resin than traditional urethane. Frixion™ M4 is the upgrade deployed on the solid gray Carbide Tank™. This new coverstock is the strongest MCP cover developed to-date and is specifically tailored for the conditions encountered on tour.

1000 GRIT LSS FINISH

To help resist lane shine, the 1000 grit Carbide Tank™ shell also features technology to boost the resilience of the dull sanded cover profile. This enables the solid gray Frixion™ M4 shell to hold the box finish longer.
