

MORICH

10 Years of Excellence

By combining our new **RESPONSIV** pearlized cover with our **HUGE** symmetrical core, we have created a ball that is clean through the front of the lane with continuous hook from the break point to the pins and tremendous hitting power.

Specific Features:

- * has a 2.470" RG for more revs at the break point.
- * is designed for light to medium lane conditions; add surface for more oil.
- * works great on most house patterns and shorter, more competitive oil patterns.
- * has a **HUGE** symmetrical core that gives it great versatility by using different drilling techniques.
- * has a .054" total diff. for large flare, improving traction on the back half of the lane.
- * expands the spectrum of the ball reactions available from **MORICH**.
