

# PREPARE FOR CONTACT

The key to the Reign of Fire™ is the utilization of the R2S™ solid reactive coverstock. From its inception, it has proven to be one of the most versatile coverstocks ever manufactured. With its strong surface profile and excellent friction characteristics it was the obvious choice for this release.

The C.A.M.™ (Continuous Axis Migration) shape utilizes unique contours along the weight block with strategically placed mass blocks. This combination delivers optimum mid-lane roll with a strong backend reaction.
