

Roto-Grip
introduces a
whole new
kind of bowling
ball...

**ROTO-
STAR X-4**

A. Solid sienna color

B. Extra thick outer shell

C. Concentrated weight block

D. A highly compressed inner core

An exciting development from Roto-Grip that means dollars for you!

We've harnessed the principles of physics to create a bowling ball that drives through the pins with unbelievable force and accuracy. **BOWLERS SCORE MORE WITH THE X-4.**

HERE'S WHY:

- A. **Solid sienna color** — insures truer roll because of uniform hardness.
- B. **Extra thick outer shell** — puts more weight at outer portion of shell. This maximizes hitting power when ball contacts pins. Hardness is 75 to 80 type D.
- C. **Concentrated weight block** — provides strong end-over-end rolling effect that minimizes ball deflection ... helps the bowler to carry light hits.
- D. **A highly compressed inner core** — improves rolling characteristics of the X-4 due to uniform density of core in relation to outer shell.

Your customers demand the best and the Roto Star X-4 is just that. Meets ABC specifications and approved for use on PBA pro tours.

Pioneers and custom-made bowling balls:
Roto-Star X-2, Roto-Star Silver Streak, Roto-Grip.
