

The Scout™ Reactive family of balls are high Rg balls with medium differential Rg. The core is a modified 3-piece construction. An offset heavy puck below the center of the ball is added inside the 3-piece core. This puck creates pin out and medium differential Rg. This is the first 3-piece Columbia ball with built-in track flare. It gets down the lane easily with good backend turn.

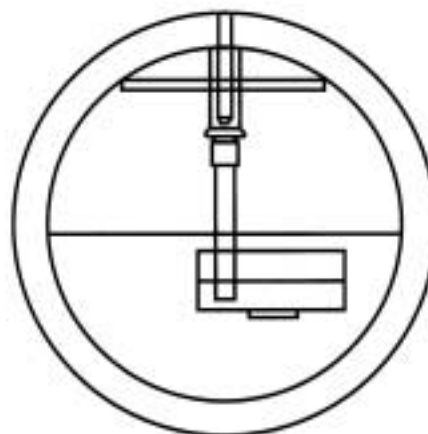

The Scout Black Non-Reactive has all the same characteristics as the Black Shadow™ and Black U-Dot®, Columbia's best 3-piece Non-Reactive Urethane balls. Now also available in Ruby Red Pearl.
