DIFFERENTIAL	0.048	0.048	0.048

The Solaris Platinum revisits our first ever bowling ball, the Solaris, with the classic Trailblazer symmetrical core specifications, wrapped with AVCx Pearl Reactive coverstock.

The AVCx Pearl Reactive Coverstock, coloured in Liquorice Pearl and Platinum, is a newer formulation of the cover used on the original Solaris, this time giving you a little cleaner skid through the heads and a later read through the midlane. The Platinum still sets up for that "Fast Arc" backend for which the original became known.

The Platinum is the next success story in a line of the most versatile bowling balls ever produced.

Platinum: The Symbol of Prestige.
