Mission Objective: Find the perfect game.

Intelligence has reported that conditions are becoming increasingly volatile. The agency recognizes this threat and has constructed a new, super device - code name: **Special Agent™**. Our laboratory has taken the EMC™ weight block and has encased it with the next generation of the original Reactor™ coverstock - the new **R2S™** Solid Reactive. Specially formulated for medium-heavy oil, micro additives give the **R2S™** amazing traction and friction. Combined, this device produces heavier roll that smoothes out the transition and generates an unstoppable reaction to the pocket. The agency is depending on you - DO NOT FAIL.
