

A Sparkling Performer.

Introducing the new Sensor Metallic Blue from TRACK. The first reactive urethane ball made with sparkles, the Metallic Blue Sensor offers the same consistent performance characteristics that you depended on in the original Candy Apple Red Sensor. Instead of having the typical pancake weight block in other 3-piece balls, the Metallic Blue Sensor features a unique high density "slug" weight block configuration. This design makes the Sensor rev hard, but not overreact on medium to dry lanes. Quality and a dazzling new look, all at a sensible price. The Metallic Blue Sensor, everything about it sparkles.

The New Bowling Technology.
