

HIGH-TECH FOURCE.

NRG™ is the real power in high-tech bowling. NRG™ features an improved, modified 2-piece ceramic PowerTech™ Core combined with a Versathane Plus™ coverstock that delivers superior performance on any lane condition. NRG™ boasts an impressive 5 inch flare potential while producing a low radius of gyration - that means more revs with less hand action - NRG™ does all the work for you.

SENSOR™ - Actually sensing specific oil patterns and reacting accordingly, the Sensor™ is an unconventionally constructed, modified 3-piece ball without the pancake weight block found in other typical 3-piece balls. Sensor™ has a dynamically shaped, high-density weight block strategically engineered and positioned to enhance roll and backend performance. Sensor™ revs harder without booking early.

CRITICAL MASS CODE RED™ creates the same free spinning additional revolutions as the original Critical Mass™, with an added twist - a maximum flare potential of 3 1/2 inches in a basic over-the-label drilling. The combination of the dynamically imbalanced outer core, the super dense ceramic PowerTech™ Core and energy storing Versathane™ coverstock allows even the weakest of releases to achieve maximum hook potential. Critical Mass Code Red™ provides control in the front part of the lane with a powerful reactive hook on the backends.

CRITICAL MASS™ - The energy storing Versathane™ coverstock of the Critical Mass™ and powerful 2-piece core configuration surrounding the dense ceramic PowerTech™ Core generates the lowest radius of gyration possible. Maximum energy potential with less hand action result in a spinning roll and sharp hook. Critical Mass™ was the first bowling ball in the industry to utilize a ceramic core.
