

**OUR NEW BALL FEATURES THE FIRST CORE, IN A CORE, IN A CORE.**

Triton - The nucleus of tritium (a component of Hydrogen bombs), consisting of two neutrons and one proton.

**SO YOU CAN KICK SOME BUTT, BUTT, BUTT.**

New bowling technology has once again emerged from the most technically advanced company in the bowling industry with the new Triton. Through extensive research Track has developed a unique product that will have as big an impact on bowling as the introduction of the ceramic core. Triton utilizes our new Tri-core Technology which allows us to place 3 separate and distinct cores inside of one another. No product ever produced has allowed the bowler to achieve the dynamics of the Triton. Recent test results show a 15% increase

in revolutions accomplished by significantly increasing the spin rate of the ball. This is pure physics. A quicker spin rate increases revolutions in the front part of the lane. Triton achieves this high spin rate through the dynamics of the inner most REV CORE. Track has also added an extra dimension with its new FLIP CORE by scientifically balancing it to match the REV CORE. Combined, these two cores dramatically increase the flip potential on the back end of the lane. The outer BALANCED CORE is designed to enhance the performance and the efficiency of the two inner cores. The Triton's spin and flip characteristics were specifically designed to match today's lane conditions. Core in a core in a core equals revs, control and flip. Launch the power of the Ocean Blue Triton and kick some serious butt.

The New Bowling Technology.™
