PRECISION SOLID

Every weight, same core.
Precision Solid uses the same asymmetric core from 12 lb to 16 lb.

Track's new Prime coverstock advances the technology started in the original Paradox with the QR series. This new technology creates a more consistent and uniform grip on the lane compared to its predecessor. This new Solid version allows the Precision to dig hard in the mid lane without expending all of its energy in one spot.

The Precision SD core was designed to create both single density and dual density versions. Offering the widest variety of RG, Differential, and Intermediate Differential combinations ever assembled into one single design, Precision Solid takes versatility to a whole new level.

Precision Solid is designed to give incredible traction in the midlane and motion downlane in the heaviest of oils.

Specs	16lb	15lb	14lb	13lb	12lb
RG	2.50	2.49	2.51	2.55	2.62
Diff	0.047	0.054	0.054	0.047	0.036

The Professional's Choice
