

High Tech Never Looked So Good.

Just when you thought your game couldn't get any better, TRACK introduces the new Sensor™ high-performance, reactive pearalized urethane bowling ball. Sensor™ actually senses specific oil patterns and reacts accordingly. The Candy Apple Red Sensor™ is an unconventionally constructed modified 3-piece ball which does not have the typical pancake weight block found in other 3-piece bowling balls. Instead, Sensor™ has a dynamically shaped, high-density weight block strategically engineered and positioned to enhance the roll and back-end performance. Because of this unique, high-tech construction, Sensor™ will "rev" harder than other traditional 3-piece balls without hooking early. Sensor™ is the first high-performance bowling ball on the market with a sensible price that makes it easy to add to your arsenal. Get a new sense of power in your game with Sensor™ from TRACK. Available in 12-16 lbs.

MODIFIED 3-PIECE BALL,
HIGH DENSITY WEIGHT
BLOCK.
