

## FOUR PART HARMONY.

The Sensor/C™ from Track. The company who first introduced the two piece ceramic core to the bowling world has now developed the ultimate in 4 piece construction. The Sensor/C™ is the first ceramic pedestal core ever. By combining the high impact, high revving action of the ceramic POWERTECH™ core, with the core construction of a three piece ball, we have created the best performance for the dollar. The unique pedestal core design allows this hard hitter to get through the heads with the ease of a three piece ball, yet will significantly rev-up in the back end like a two piece. A combination not currently available in any product on the market. Track is always the innovator never the follower.™ Get your Sensor/C™ now and get it from the original developer. Don't be fooled by imitations and look alikes.
