

# TAKE A SECOND LOOK AT HIGH TECH.

From TRACK, the new force in bowling technology, comes the Sensor II™. The new Blazin' Blue Sensor II™ is not just another version of the original Sensor,™ it's a whole new ball - an improved version of the popular Purple Critical Mass.™ The energy-storing Blazin' Blue Pearlized Versathane™ coverstock and the 2-piece PowerTech™ core configuration give the Sensor II™ more flip in the backend, a 2 to 2 1/2 inch flare potential and the same free-spinning action of other ceramic core bowling balls in the front of the lane. Sensor II™ gives you the same advantages of the super hard and dense ceramic PowerTech™ core technology at a reasonable price - it is the first moderately priced ceramic core ball made available in the market today. TRACK was the first to bring you ceramic technology in 1993 and continues to manufacture top quality, super hard ceramic core material. DO NOT ATTEMPT TO DRILL PAST 3 INCHES.

Additional revs, additional flip and additional savings - that's the new Blazin' Blue Pearlized Sensor II™ from TRACK.
