

A S O L I D O N E - T W O P U N C H .

syn•er•gy (sin' ar jē) **n.** The simultaneous action of separate components which, together, have a greater total effect than the sum of their individual parts.

And the winner is SYNERGY™ SOLID from TRACK. The Forest Green SYNERGY™ SOLID features Versathane XH+, the most aggressive coverstock TRACK has ever put on a ball. Versathane XH+ gives the SYNERGY™ SOLID an overall hook of 7 to 10 boards more than the SYNERGY™ PEARL, making the SYNERGY™ SOLID perfect for oily lane conditions. TRACK's patented PowerTech Ceramic Core design yields the highest C.O.R. (coefficient of restitution—which is a measure of energy transferred from the ball to the pins) in the industry. Significantly higher than the competition.

Increased revolutions, dramatic hooking action, and maximum scoring potential. Together they make the new SYNERGY™ SOLID, combined with the SYNERGY™ PEARL, a deadly one-two combination.
