

TRACK INC. STATE OF THE ART IN BOWLING EQUIPMENT

THE ENFORCER® SERIES

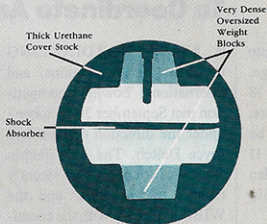

BLUE . . . Designed for heavy or long oil conditions. Highly porous surface for maximum traction on even the wettest lanes. Weights 14, 15 and 16 lbs.

BLACK . . . For a wide range of lane conditions. Moderate porosity and lightly polished, the black ENFORCER easily holds the line on medium to short oiled conditions. Weights 14, 15 and 16 lbs.

DUAL WEIGHT CONSTRUCTION

The ENFORCER has dynamically balanced dual weight blocks and a thick urethane shell. The built-in shock absorber absorbs shock, resulting in optimum pin carry. The dual weight design reduces ball deflection to minimum. As the ball enters the pocket the first weight block hits the pins - the second weight block rotates around to keep the ball in line thus, less deflection and more pin carry. End result - more striking power.

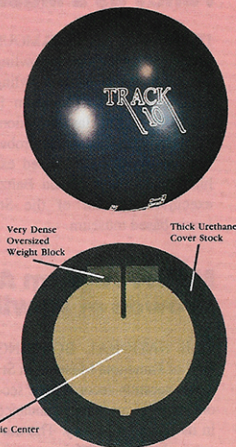

NEW! POLYESTER ENFORCER®

DEEP RED . . . Designed for uncontrollably-hooking or short-oiled conditions. This ENFORCER rolls like polyester because it is polyester. And, it hits like urethane because it is an ENFORCER. It is constructed with a thick polyester shell, with the same dynamically balanced dual weight blocks as its urethane counterpart.

TRACK-10®

ROYAL BLUE . . . TRACK-10 ball is designed for heavily-oiled lanes with little or no backends. The TRACK-10 has a very thick urethane shell (see cutaway) with a dense oversized weight block. This weight block is placed lower in the ball to create an earlier roll with little or no skid pattern. The ball is highly porous with a dull sanded finish for maximum hook. Weights 14, 15 and 16 lbs.

THE TRACKSTER® SERIES

The TRACKSTER ball is available in three colors - **PURPLE, RED and BLUE**. It is a urethane ball, standard to the industry.

The TRACKSTER has the characteristics of a medium-to-short-oil ball, is moderately priced, and is the perfect complement to the TRACK-10 ball.

You get maximum control and devastating performance with the TRACKSTER. It has a dense, pancake-shaped weight block which is positioned near the surface of the cover stock. This type of construction allows the TRACKSTER to travel further down the lane before reacting, thus, storing nearly all its energy until it enters the pocket. Weights 10, 12, 13, 14, 15 and 16 lbs.

Look good! Feel good! With TRACK INC. matching accessories and equipment.
