

PRESENTING THE BOWLING EQUIVALENT OF A NUCLEAR EXPLOSION.

*The Flip Core.
Track's new Flip Core design
increases the flare potential to
produce additional hook and flip
in the back end of the lane.*

*The Balanced Core.
Balances the Flip and the Rev Core
to enhance the performance, efficiency and
smooth roll through the front part of the lane.*

*The Rev Core.
Gives the Triton Heat a greater spin
rate than any other ball on the market.*

*PowerPlus® coverstock.
Aggressive interlaced resin containing
Mica, gives the Triton Heat the ability
to combat the viscosity of today's lanes.*

Three seconds after its release, all that will remain are 10 little mounds of ashes, the satisfaction of complete victory and total devastation. Introducing the newest weapon in our Triton® arsenal. The TRITON HEAT.™

The Design

The TRITON HEAT features TRICORE™ technology (patent pending), the industry's most advanced core design. The TRITON HEAT's low radius of gyration, combined with its increased flare potential, dramatically increases the spin rate of the ball. Add our new "PowerPlus" coverstock containing Mica for more gripping interface with the lane and you have the most dynamic Triton ever. The TRITON HEAT has increased hook and flare potential creating unequalled control, revs and flip, making it the ultimate first strike weapon.

The Technical Advantage

The TRITON HEAT delivers two distinct advantages over the competition: First, even more revolutions than in the original Ocean Blue Triton; Secondly, even more important than increased revolutions, is increased pin carry. An independent study has proven that a ball rolling end over end will increase pin carry up to 98 percent. The TRITON HEAT's design enhances the ball's ability to stabilize just as it enters the pocket, thus greatly increasing the percentage of strikes on both pocket and off pocket hits. The TRITON HEAT. Make your competition sweat!
