

# America's FIRST Double Shell Bowling Ball

Roto Star

# X-3

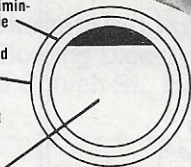

The most revolutionary change to hit the lanes since urethane. The "Roto-Star X-3" is the first ball made to challenge the new heavier-weight pins. It is the **FIRST** bowling ball to feature a "DOUBLE SHELL" construction consisting of urethane and polyester for added impact, making it an incredibly hard-hitting ball that keeps pin trajectory low for better action. The X-3 meets ABC specs and you can see it now at your dealer, or call or write us for name of dealer nearest you.

- a polyester shell, heavier than the outer shell, produces a truer roll, eliminates unwanted wobble

- a specially formulated soft 100% urethane shell  $\frac{1}{4}$ " thick compresses against the  $\frac{3}{8}$ " polyester shell at point of impact to give pins a "Double Bang"

- a polyester core with puddle-weight block, adapts to right or left-hand bowlers
